

Oct. 2. Practice

Signs of dis, not the same as Symp. signs  
muscles ill.

Signs are multiform  
We call to our assistance  
all the senses not  
always the Taste  
Court-nance when  
first enters, color of  
skin, movements & k  
Laryngitis, difficult breath-  
ing, We are in the  
habit of saying the  
patient looks better  
which means much  
wrinkled brow sig. pain  
From the eye  
ocular pain sig.  
conjunctivitis

From angle of mouth  
down, Thoracic dis,  
Hyperventilation because so  
well described by Hb.  
The features drawn &  
sketched

Hypochondriac may become  
melancholy, Bright eye  
hictic glaze of phthisis  
Pale puffy face of Anemia  
Notice position  
of walking gait,  
mode of lying in  
bed great restlessness  
On colic doubled up  
Slipping to foot of bed  
indicates debility  
When knees drawn up  
some trouble in
