

When riduce have
the leg flexed
cutting and colotomy
make opening in
the groin & later a
snuckle of intestine
and run the edges
to each side of wound

Feb. 9, 1885;

The bladder,
may be distended to
the capacity of a gal,
urachus at birth should
be ablated,

When not closed
pervious urachus,
urine dribbles out at
the navel, it is
sometimes wounded

Femoral Hernia

We have to deal with
the fascia lata

Pubic portion and

iliac portion

Thin fascia covering
the saphenous opening

Cribiform fascia

Hernia comes down

between vein and

Limbembats lig.

Poupart's lig also

crural arch
